

PAAVAI COLLEGE OF ENGINEERING,NAMAKKAL

Project Design phase – I

Problem Solution fit

Project name: IoT based smart crop protection system for agriculture

<u>1.Customer segments:-</u> The customers who are going to adapt this project contains of <ul style="list-style-type: none">● Large scale Farmers● Crop importers● Remote Farmers	<u>6.Customer constrains:-</u> The customer wants a device the problems in crop protection when he is on remote or absence of humans. <ul style="list-style-type: none">● Prevent the crops use this if it is necessary● Use it according to the climate change● Resource efficient	<u>5.Available solutions:-</u> <ul style="list-style-type: none">● Integrating integrated pest and insect control is the greatest strategy to prevent crop damage.● Certain cultural practices can prevent or reduce insect crop damage.
<u>2.Jobs to be done :-</u> <ul style="list-style-type: none">● Choosing the position of placing the smart sign board● Control system of the mechanism is difficult	<u>9.Problem route cause:-</u> <ul style="list-style-type: none">□ To prevent economical loss for farmers from yield=	<u>7.Behaviour:-</u> <ul style="list-style-type: none">□ The customer wants to make the revolutionary propagation in the rating of the crop protection through the reliability of time efficient.

<p>3.Triggers:-</p> <ul style="list-style-type: none">❑ From this crop protection method farmers can easily make efficient production in yield	<p><u>10.Solution:-</u></p> <ul style="list-style-type: none">❑ Our solution for this project is to initiate the crop protection system using the sensors and drones sensed information from field and protect the crops	<p>8.Channels of behavior:-</p> <p>The channels of behavior recombines the ration of the following</p> <ul style="list-style-type: none">● Online● Offline
<p>4.Emotions:-</p> <ul style="list-style-type: none">❑ People get more info about the needful resourses in the crop protection
